

PAM Tooling Strategy - RFI Questionnaire

Privilege Access Management - Request For Information Summary

Lockheed Martin is currently exploring next-generation *Privileged Access Management (PAM)* solutions to support a robust defense in depth security portfolio. As such, Lockheed Martin is soliciting a selection of vendors, seeking information relative to this effort. Information obtained from this questionnaire will be used to determine eligible candidates which will be evaluated by Lockheed Martin Corporate Information Security (CIS) and internal partners from different business areas. Post evaluation, the solutions presented may be called upon for a demonstration/workshop with the Lockheed Martin team. Lockheed Martin invites you to participate in the following Request for Information (RFI) questionnaire, relative to your portfolio of privilege access management technologies, tools, and capabilities.

Privilege Access Management Domains/Technology

This section will focus on technology available within each domain as described below. Please indicate capabilities/components for each product domain /technology that is offered within your current portfolio of solutions (please include details if the capability requires any unique configurations or shared agent capabilities). For each domain/technology, please include information as related to the areas of interest as described below.

Areas of Interest (Provide Details)

- Authentication (Examples: MFA; SSO; Token; Certificate; Biometrics; Permissions; Protections around Authentication; etc...)
- Functional Components of System (Examples: How the solution(s)/system(s) work; High Availability; Overview of Management/Deployable Components; etc...)
- Password/Secrets Management (Examples: Password Management Capabilities; Password Storage; Password Rotation; Supported Platforms; etc...)
- Automation/API Integration(s) (Examples: Integration with Identity Governance Solutions, RPA Applications; IT Automation Engines; Vulnerability Management Applications, Endpoint Security, etc...)
- Privileged Session Management (Examples: Capabilities surrounding monitoring, recording, and management options for privileged sessions, Authentication, Available options, etc...)
- Reporting/Logging (Examples: Raw Log Format(s); Log Streaming, Log Ingestion, etc...)
- Security Configuration Components (Examples: Infrastructure/Hosting Security; Access Controls; Personnel Vetting; Security Tools; Auditing /Governance, etc...)

Domains: Solution/Technology

- Enterprise Vaulting Solutions
- Personal Password Management
- Enterprise Secrets Management
- Just In Time Administrator Rights
- Endpoint Privilege Management

Architecture/Deployment/Integrations

1. Provide an architecture diagram of your management solution(s). Be sure to indicate existing options for On-Premise; SaaS and Hybrid deployments(s)
 - a. Please indicate availability of Infrastructure as Code (IaC) deployment option(s)
2. In granular detail, please describe the deployment model(s) available for each solution(s) within your portfolio.
3. Indicate the technology that is used to store data in each deployment model.
4. If a SaaS solution is offered, is the solution FedRAMP certified?
 - a. Please indicate the hosting service(s) available for each solution(s) (i.e. Microsoft Azure; AWS; etc...)
5. Are there scalability limitations for total supported nodes?
 - a. What is the largest node count that is currently supported?
 - b. Please describe any data ingest controls/thresholds that can be configured for your solution(s)?
6. Describe any network considerations to be expected with a large scale deployment of your solution(s).
7. Describe resiliency and availability for the various deployment models of your solution(s).
8. Indicate any existing integrations with external/partner solutions. Below is a list of technology and workflows that are of specific interest to the team.
 - a. Cybersecurity (i.e. Anti-Virus/Anti-Malware)/Endpoint Detection and Response (EDR) Integrations
 - b. Zero Trust/Zero Trust Network Access Integrations
 - c. Automation/Ticketing Integrations
9. Does your solution(s) offer data export/ingestion integration into third party security information and event management tools (SIEM), i.e Splunk.
 - a. Please include any information related to technical add-ons; apps; etc...

Support/Configuration/Licensing

1. Describe the support model(s) available for each solution(s)
2. Are internal support personnel who manage the SaaS infrastructure United States citizens if the solution has not been FedRAMP approved?
3. Please provide internal and logging visibility options for SaaS/Hybrid deployment infrastructure.
4. Are product guides/documentation and self help KBAs readily available for your solution?
5. Is a community site/forum available for questions/answers/discussion?
6. Describe your process for product enhancements/features requests.
7. Please describe the available licensing model(s) for your solution(s).
8. List all operating systems and platforms that are supported by your solution.
9. Does your solution support custom policies?
10. Does your solution possess an Application Programming Interface (API)? If so, please provide a link to documentation if available.

Please provide any additional capabilities specific to any tools/technology within your Privileged Access Management portfolio that your team would like to highlight that have not been aforementioned in any of the sections above.
